PFAS, per- and polyfluoroalkyl substances

PFAS, Per- and polyfluoroalkyl substances, is a large and complex group of over 10 000 identified substances with varying properties that are widely used in society. One thing that all PFAS have in common is that they are very difficult to break down. Some PFAS are harmful to both the environment and human health. All PFAS are man-made synthetics that do not occur naturally in the environment.

Rubber membranes manufactured by SealEco does not contain any PFAS (per- and polyfluoroalkyl substances).

Based on our best knowledge and declarations from our compound suppliers, PFAS are not part of our products.

If you have any questions, don't hesitate to contact us.
